

KIN Gingival Complex

0.12% CHLORHEXIDINE DG

0.05% CETILPYRIDINIUM CHLORIDE

ALLANTOIN + PANTHENOL COMPLEX

Reduces dental plaque and helps strengthen and tone delicate gums

Patented formula that combines the **toning** and **moisturising** effect with the antiplaque efficacy.

Chlorhexidine DG 0.12% + CPC 0.05%

GOLD STANDARD + BROAD-SPECTRUM ANTIPLAQUE AGENT

Alpantha Complex

Moisturizing + Epithelizing

Functional compound comprised of:

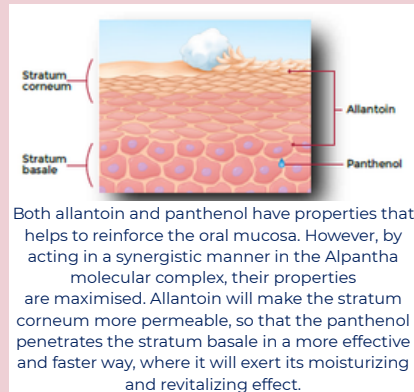

Allantoin:

Provides elasticity and helps to revitalize the gums.

Panthenol:

Helps to reinforce epithelium and mucous membranes and provides comfort.

Both allantoin and panthenol have properties that helps to reinforce the oral mucosa. However, by acting in a synergistic manner in the Alpantha molecular complex, their properties are maximised. Allantoin will make the stratum corneum more permeable, so that the panthenol penetrates the stratum basale in a more effective and faster way, where it will exert its moisturizing and revitalizing effect.

KIN GINGIVAL COMPLEX
Toothpaste 75 ml

Does not contain sodium lauryl sulfate, therefore it does not interfere with the antiplaque effect of chlorhexidine. Ensures effectiveness of the treatment.

Eases the correct plaque removal, whilst at the same time, cares for the gums.

Indications

- To promote the reduction of dental biofilm.
- To help strengthen and tone delicate gums.
- Oral hygiene during dental interventions.

KIN GINGIVAL COMPLEX
Mouthwash 250 ml

INTENSIVE CARE 2-3 WEEKS
